

Jordan Blum

Product Engineer - Consumer Products, Developer Tools & AI Agents

(847) 848-4251 | jordanblum16@gmail.com | blumjordan.com | github.com/jordanblum1 | linkedin.com/in/jordanblum1 | New York, NY

SUMMARY

Product engineer with 8 years taking products from early idea to production code, measurement, and iteration. At Roam, I am engineer #3 on a four-person team and one of two lead engineers building Reed, its AI realtor. I work across product decisions, interface design, full-stack systems, analytics, and evaluation.

TECHNICAL SKILLS

Product & Frontend: React, TypeScript, Next.js, Phoenix LiveView, Swift, Figma, design systems, accessibility

Backend & Data: Elixir/Phoenix, Node.js, Python, Rails, PostgreSQL, Redis, AWS

AI Systems: Multi-tool agents, VLM pipelines, structured outputs, evaluation frameworks, conversation analytics, Anthropic API, LangChain, ReqLLM, MCP

Delivery & Platform: Docker, Kubernetes, Terraform, CI/CD, GitHub Actions, Sentry

EXPERIENCE

Roam

May 2025 - Present

Product Engineer New York, NY | Engineer #3 of 4

- **Own features end to end** across Roam's marketplace and Reed - from product scoping and interaction design through React/TypeScript and Elixir/Phoenix implementation, analytics, rollout, and iteration - on a four-person engineering team.
- As one of two lead engineers on **Reed, Roam's AI realtor**, built streaming chat and tool-call interfaces plus agent APIs that expose multi-step progress, long-running work, and partial or structured outputs.
- Built **multi-tool research and pricing workflows** using Anthropic AI SDK, ReqLLM, and LangChain to orchestrate VLM photo analysis, web research, and structured reports; hardened retries, timeouts, prompt caching, and compliance guardrails.
- Built a **daily AI conversation-analytics pipeline** that classifies funnel stage and sentiment, diagnoses drop-off, and publishes HTML and Slack reports. It surfaced a 13x completion lift, a dead-end affecting 73% of sessions, and seller conversion moving from **25% to 51%**.
- Ran a **5-model x 4-batch VLM evaluation**, selecting a model about 13x cheaper per listing while maintaining the production quality bar; structured pricing-report evals sustain **87%+ feedback positivity**.
- Built the internal **parallel-agent harness** our team uses to plan, dispatch, and supervise Claude Code and Codex agents, with cross-model review, crash recovery, LLM graders, and human approval gates; merged-PR velocity rose **about 3-4x** after adopting AI-assisted workflows.

Procore Technologies

May 2021 - May 2025

Software Engineer to Senior Software Engineer Remote

- Owned a React/Rails deployment platform for **300+ engineers** across ASG, Kubernetes, and Capistrano; built self-service credential tooling for 80+ teams.
- Defined CI/CD patterns that cut new-service onboarding from **days to hours**; led design reviews and mentored engineers on frontend, testing, and delivery practices.
- Managed the product roadmap using usage metrics and engineering-team research; championed **WCAG accessibility**, performance, and design-system standards across internal tools.

Workday

Aug 2018 - May 2021

Associate DevOps / Release Engineer to Senior Associate Developer Pleasanton, CA

- Built Python, PostgreSQL, and JavaScript developer tools, including a test finder saving about 3 hours per week; rebuilt CI/CD workflows that cut release timelines **50%**.
- Enhanced an internal chatbot with ServiceNow, AWS Lambda, and usage analytics for 80+ developers; drove adoption through demos, documentation, and hands-on pairing.

PROJECTS

Alive Still: Built an iOS safety check-in for people who live alone; a missed daily window alerts chosen emergency contacts by SMS. Swift, CloudKit, RSA encryption, Node.js, Redis.

Chicks of NYC: Designed and built an NYC wing review platform end to end: brand, motion, automated form pipeline, and geocoded caching. Next.js, TypeScript, Airtable, Redis, Maps API.

Citi Bike Wrapped: A personalized year in review generated from public Citi Bike ride data. Next.js, TypeScript.

EDUCATION

BS Computer Science - Santa Clara University - Minor: Studio Art (Graphic Design)

June 2018
